

The 5th International Thematic Symposium of
Department of Inter-institutional Collaboration

Environment and the Sustainable Development of Rural and Urban Societies in East Asia

China, which has achieved rapid industrial development, has been facing serious environmental pollution and social problems that can be traded for rapid economic growth. In this symposium, we will examine what the rural and urban social environment in China that has supported the economic development and compare the current situation of rural societies in Japan. Topics in the environmentally friendly agriculture, conservation of endangered plants, pesticide issues in Japan, and human resource development programmes at the GIAHS sites will be presented.
